

TORTOISES are turtles that live on land.

ALDABRA TORTOISES

are the second-largest species of tortoise in the world, usually weighing in between 200 to 300 pounds.

Radiated tortoises weigh about 23 pounds, and one of their favorite foods is **CACTUS** – they even eat the spines!

We have several species of tortoises at Zoo Atlanta, including the **ALDABRA** and the **RADIATED**.
